

Press release, Hannover, Germany, CeBIT 15-21 March 2007

“Time is like sand in your hands, it runs out and you don’t even notice it”. Well, it’s been 14 years; Tradition is successfully developing, implementing and maintaining the InfoCommunication solutions. As we look over the shoulder, we do see the products and technologies for security related projects, specialized solutions for police, arm forces, medical institutions. At the same time, a big deal of work is done in InfoQuiry™ systems and media oriented services.

During all these years, Tradition steadily and smoothly metamorphosed into a holding, “Tradition Group”, oriented towards R&D, having a vast franchise and partners network. TG is an active participant of the federal and regional governmental projects like “e-government”, municipal projects and electronic media related services.

Keeping in mind the sharp switchover from “Technology” to “Human Technology”, where priorities are given to technologies which can fulfill reasonable requirements of an individual person and at the same time preserving the nature and ecological atmosphere, TG is especially concentrated in Hi-Hume oriented products, technologies and solutions, enabling more reliable and sophisticated life.

2006 for TG was quite successful, continuing the traditional growth rate. TG established business accelerator in Moscow, where dedicated teams are working in close association with leading institutions to commercialize Russian GLONASS, developing new generation intellectual navigation and security devices and developing 4D Geo information systems. The ultimate goal is to create a unique and universal solution integrating the projects of the business accelerator. In 2006, TG grew close relationships with the companies like Microsoft and AMD, joined TOP 500 IT companies according to IT EUROPA.

TG in H6A48 is presenting the first version of its geo-information management system named GeoMan™, which enables 3D navigation, modeling and platform to create service oriented business models. The system logically complements our other existing solutions and acts as an integrating platform for NetViser™, the intellectual InfoQuiry and digital signage system, Lockey™, the interactive positioning and security system for mobile and fixed properties. The resultant platform is contributing towards the development of service oriented business of the company, especially related to location based services (LBS).

Finally, we would like to wish all the exhibitants, a wonderful & successful exhibition, to all the visitors, catching news and fruitful meetings. Stable growth new horizons in this ever changing, swiftly changing world, to all of us.
